

Smart Link Manager - Detailed Learning Notes (Day 2)

Key Concepts Learned

- Fetch API
- GET vs POST
- JSON data transfer
- req.body and res.json
- express.json middleware
- CORS
- React useState
- Event handling
- Array.map and keys
- API Keys and security
- dotenv and .env files
- .gitignore
- node_modules
- Gemini SDK
- Git init, add, commit, push

Important Lessons

- Browser URL bars always send GET requests.
- POST is needed when sending data.
- API keys must stay in backend.
- .env should never be pushed to GitHub.
- node_modules should not be committed.
- Frontend → Backend → Gemini → Backend → Frontend is the complete flow.
